

TIA Tool upgrade

Period of Performance: 2017-2019

Which potential impacts on European regions can be created by the implementation of policies? To answer this question, ÖIR in cooperation with other partners has developed the ESPON ARTS methodology on behalf of ESPON already in 2010. The webtool based on this methodology was now further improved in the project.

New user interface of the tool, © ESPON

Apart from the technical development of the tool – such as the update of the user interface, the update of indicators as well as the tools functionalities – some new methodological elements have been integrated. A “TIA checklist” shall help determine the necessity of a TIA. Furthermore, a training and certification process for interested users has been developed. As part of the project, 15 TIA workshops for the European Commission and the Committee of the Regions have been implemented, as well as trainings on regional, national and international level conducted.

Project team: Erich Dallhammer, Roland Gaugitsch, Chien-Hui Hsiung, Bernd Schuh, Roman Seidl, Martyna Derszniak-Noirjean

Partners: Laurentia Technologies

Client: ESPON EGTC
